MoodSyncAI

Multi-Modal Sentiment & Emotion Analyser

Student:	Veera Raghava Mallikarjuna Naidu Bhogadi
Matriculation:	100004442
Programme:	M.Sc. Applied Data Science & Analytics, SRH Hamburg
Module:	Data Analytics 3 — Deep Learning & GenAI
Instructor:	Prof. Dr. Gayan de Silva
Semester:	Summer 2025/2026
Exam slot:	14 May 2026, 10:40–10:50 (MS Teams)

Code Repository & Documentation

All project documentation, source code, README, architecture diagram, and demo screenshots are hosted on GitHub:

https://github.com/Bvrmnaidu/moodsync-ai

The repository **README.md** contains the full project documentation, including architecture, fusion logic, model choices, hybrid generative summary design, tested scenarios, and a section listing the three implemented extended features.

Project Files

`cnn_emotion.py`	Facial emotion classifier (ViT)
`text_sentiment.py`	Text sentiment classifier (RoBERTa)
`fusion.py`	Multimodal fusion layer (rule-based)
`summary.py`	Generative summary (hybrid: rules + flan-t5-base)
`app.py`	Streamlit UI
`attention_rollout.py`	ViT attention rollout heatmap (Extended Feature 3)
`audio_transcribe.py`	Whisper audio transcription (Extended Feature 2)
`README.md`	Full project documentation
`screenshots/architecture.png`	System architecture diagram

eCampus Submission

This PDF satisfies submission item 1 (Documentation). Submission item 2 (Codebase) is the GitHub link above. Submission item 3 (Presentation) is uploaded separately as **MoodSyncAI_Presentation.pdf** / **.pptx**.
